

AIRLAB SUBANG

AIRCRAFT WEIGHT & BALANCE

Focuses on calculating and managing aircraft weight and balance to ensure safe flight operations and compliance with regulatory requirements.

Introduction

Proper management of aircraft weight and balance is essential for the safety and performance of flight operations. This course provides participants with an in-depth understanding of the principles of weight and balance, including load planning, distribution, and calculation techniques. The course emphasizes the importance of adhering to regulatory requirements and safety standards to prevent accidents caused by improper weight and balance management. Participants will learn how to assess and document weight and balance data, ensuring that aircraft are operated within safe limits.

Course Objectives

To provide participants with the knowledge and skills to calculate and manage aircraft weight and balance effectively.

Course Outline

- Principles of Weight and Balance
- Regulatory Requirements
- Load Planning and Distribution
- Calculation Techniques
- Safety Implications
- Documentation and Reporting
- Case Studies
