

AIRLAB SUBANG

RISK MANAGEMENT SYSTEM

Introduces the principles and processes for identifying, assessing, and managing risks within aviation operations to enhance safety and efficiency.

Introduction

Risk management is a fundamental component of ensuring safety and efficiency in aviation operations. This course introduces participants to the principles and practices of risk management, focusing on identifying, assessing, and mitigating risks in aviation environments. The course covers the regulatory requirements for risk management and the importance of integrating risk management into daily operations. Participants will learn how to develop and implement a risk management system that enhances safety and compliance within their organizations.

Course Objectives

To equip participants with the knowledge and skills to effectively manage risks in aviation operations.

Course Outline

- Principles of Risk Management
- Regulatory Requirements
- Risk Identification and Assessment
- Risk Mitigation Strategies
- Integrating Risk Management into Operations
- Monitoring and Review
- Case Studies and Best Practices
