

AIRLAB SUBANG

SAFETY MANAGEMENT SYSTEM

Introduces the framework for managing safety in aviation organizations, including risk assessment, safety culture, and incident reporting.

Introduction

A Safety Management System (SMS) is a structured approach to managing safety risks in aviation. This course introduces participants to the principles and components of SMS, emphasizing its role in enhancing safety performance across aviation operations. Participants will learn how to identify hazards, assess risks, and implement safety measures within their organizations. The course also highlights the importance of safety culture, continuous improvement, and regulatory compliance in maintaining an effective SMS.

Course Objectives

To equip participants with the knowledge and skills to implement and manage an effective SMS in their organizations.

Course Outline

- SMS Principles and Framework
- Hazard Identification and Risk Management
- Safety Assurance
- Safety Promotion
